Museum Collections

NIH Stetten Museum Collection

The NIH Stetten Museum collection includes scientific and clinical instruments that were either used in ground-breaking research at the NIH, were invented at the NIH, or were commonly used in laboratories or clinics at the NIH. The collection also contains non-scientific artifacts that speak to life at NIH including clothing, artwork, models, and even toys. We are always adding to the collection, so keep checking back.

To search for objects (and photographs, documents, finding aids, etc.), visit our Search Page.
