New display cases in three buildings on campus
Swan, Jeremy (NIH/NICHD) [C] posted on Mar 18, 2020

New display cases have been installed around campus. Read a comic book about Joseph Goldberger's work in pellagra in the early 20th century at the Building 1, 3rd floor case. Be amazed at the variety of Clinical Center patches near the Hospitality Desk on the 1st floor of the Clinical Center. Think about the social context of coloring books from the Clinical Center by its 2nd floor cafeteria. And salute a leading woman investigator, Dr. Margaret Pittman, in the Building 60 lobby. Two cases are coming to the Vaccine Research Center, and one to Building 6.

Dr Herbert Tabor Dies 1918-2020

Swan, Jeremy (NIH/NICHD) [C] posted on Aug 25, 2020

Courtesy of the Tabor Family We are sad to relay news of the passing of Herbert Tabor, M.D., the world's foremost authority on the enzymatic pathways of polyamines, as well as an esteemed editor of the Journal of Biological Chemistry for 40 years, and, until his death at age 101, a senior principal investigator in the NIDDK Laboratory of Biochemistry and Genetics, where he had served as lab chief until 1999.

Hand Hygiene in Hospitals
Swan, Jeremy (NIH/NICHD) [C] posted on May 20, 2020

CC News, July 2013, Michelle Holshue

> *"One of the most remarkable developments of the last 50 years is the awakening of a sanitary conscience. It is a new thought to many men that the care of the body and cleanliness of surroundings are very considerable factors in the comfort, safety, and even the life and health of their fellow men."*
>
> - *—Surgeon General Hugh Cumming, 1928.*

Behind the Mask

COVID-19 has impacted the NIH community in many ways—from researching and providing information about the disease, to developing therapeutics and vaccines, to caring for patients in the Clinical Center, to re-configuring the ways we perform our jobs. To preserve this important time in NIH history, the Office of NIH History and Stetten Museum is seeking reflections, documents, photographs, and objects about how those at NIH have experienced the COVID-19 pandemic.

Behind the Mask

A Short History of the NIH

How NIH grew from a one-room laboratory to become the largest biomedical research agency in the world.
